Save the planet

Amarasekera N

Journal of the Ceylon College of Physicians, 2016, **47**, 55

Global warming leading to climate change
From drought to floods, a catastrophic range!
The world at last seems to have realized
All are culpable, should all be penalized?

Developed countries powered their Way to prosperity
Using fossil fuels, its impact then unknown to humanity
When developing countries, the ladder to climb now seek
The developed ones protest! The height of cheek!

The developed exceed environmental limits through greed
Call to limit green house gases giving the lead
The deprived are struggling to meet their needs bare
From those steeped in poverty is the request fair?

500/o of carbon emissions are caused by 100/o of the richest
While 1.0o/o is produced by 500/o of the poorest
When such are the figures only the meanest I dare say
Would at the door of the poorest the blame lay

Technology is available but is it accessible or affordable
To harness wind, water and the sun costs are formidable
To shift the burden on the poor is it morally acceptable!
Living in clover the rich do not give up even the dispensable!

Government heads and world leaders have come to their senses
Organized a meeting in Paris, termed "Climate Rescue Summit"
There is only this one world, there is no planet B!
The leaders addressed the subject for the world to see

In support of the "Save the Planet" movement
All came together at this important moment
Fate of humanity is at stake, let's get together
As Mother Earth has reached the end of the tether

From Hollywood heavyweights to Asia's slums
Humans formed chains answering to beating drums
Standing on the bed rock of collective enterprise
The nations made a decision taking all by surprise

If without pride and prejudice prevails sanity
There is hope – do not despair for humanity
If global warming can be sensibly curtailed
The world's climate a century ago can be regained
